Data in many forms

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on the Internet, compact disc, diskette, computer printouts, microfiche and microfilm, and magnetic tape. Maps and other geographic reference materials are available for some types of data. Direct online access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable database and retrieval system.

How to obtain more information

Inquiries about this product and related statistics or services should be directed to: Labour Force Survey Section, Household Surveys Division, Statistics Canada, Ottawa, Ontario, K1A 0T6 (telephone: (613) 951-9448) or to the Statistics Canada Regional Reference Centre in:

Halifax	(902) 426-5331	Regina	(306) 780-5405
Montréal	(514) 283-5725	Edmonton	(403) 495-3027
Ottawa	(613) 951-8116	Calgary	(403) 292-6717
Toronto	(416) 973-6586	Vancouver	(604) 666-3691
Winnipeg	(204) 983-4020		

You can also visit our World Wide Web site:
<http://www.statcan.ca>

Toll-free access is provided for all users who reside outside the local dialing area of any of the Regional Reference Centres.

Ordering/Subscription information

All prices exclude sales tax

Catalogue no. 71-201-XPB, is published annually as a standard paper product for \$114.00 in Canada. Outside Canada the cost is US\$114.00.

Please order by mail, at Statistics Canada, Dissemination Division, Circulation Management, 120 Parkdale Avenue, Ottawa, Ontario, K1A 0T6; by phone, at (613) 951-7277 or 1 800 770-1033; by fax, at (613) 951-1584 or 1 800 889-9734; or by Internet, at order@statcan.ca. For changes of address, please provide both old and new addresses. Statistics Canada products may also be purchased from authorized agents, bookstores and local Statistics Canada offices.

Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner and in the official language of their choice. To this end, the agency has developed standards of service which its employees observe in serving its clients. To obtain a copy of these service standards, please contact your nearest Statistics Canada Regional Reference Centre.

Des données sous plusieurs formes

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes. Les données sont disponibles sur Internet, disque compact, disquette, imprimé d'ordinateur, microfiche et microfilm, et bande magnétique. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinales et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toute demande de renseignements au sujet du présent produit ou au sujet de statistiques ou de services connexes doit être adressée à : Section de l'enquête sur la population active, Division des enquêtes-ménages, Statistique Canada, Ottawa, Ontario, K1A 0T6 (téléphone : (613) 951-9448) ou à l'un des centres de consultation régionaux de Statistique Canada :

Halifax	(902) 426-5331	Regina	(306) 780-5405
Montréal	(514) 283-5725	Edmonton	(403) 495-3027
Ottawa	(613) 951-8116	Calgary	(403) 292-6717
Toronto	(416) 973-6586	Vancouver	(604) 666-3691
Winnipeg	(204) 983-4020		

Vous pouvez également visiter notre site sur le Web :
<http://www.statcan.ca>

Un service d'appel interurbain sans frais est offert à tous les utilisateurs qui habitent à l'extérieur des zones de communication locale des centres de consultation régionaux.

Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises, les administrations canadiennes et les autres organismes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

THIS PUBLICATION WAS PREPARED UNDER THE DIRECTION OF:

Mike Sheridan, Director General, Labour and Household Surveys Branch (613) 951-9480

Deborah Sunter, Assistant Director, Labour Force Survey Program (613) 951-4740.

LFS Unit Heads:

- Jean-Marc Lévesque, Analysis (613) 951-2301
- Ross McOrmond, Data Processing (613) 951-4734
- Royal Gagnéux, Processing (613) 951-4725

with the assistance of the staff members of Labour Force Survey Program.

OTHER SOURCES OF LABOUR FORCE SURVEY DATA

CANSIM

Most of the data published in Historical Labour Force Statistics (catalogue 71-201-XPB) are also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). Users interested in accessing data via CANSIM should contact one of Statistics Canada's regional centres at the numbers listed on the inside front cover of this publication, or contact the Marketing Division, Statistics Canada, R.H. Coats Building, Ottawa, Ontario, K1A 0T6 (613) 951-8200.

CD-ROM

A wide variety of data (including those contained in this publication) are available on the Labour Force Historical Review CD-ROM (71F0004XCB). This CD-ROM retails for only \$195.00. Order now by contacting the Statistics Canada Regional Reference Centre nearest to you or our Order Desk on Internet at order@statcan.ca.

Unpublished data

Additional data are also available on request from the Labour Force Survey Program, on a cost recovery basis.

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences - Permanence of Paper for Printed Library Materials, ANSI Z39.48 - 1984.

CETTE PUBLICATION A ÉTÉ PRÉPARÉ SOUS LA DIRECTION DE:

Mike Sheridan, Directeur général, Direction des enquêtes-ménages et du travail (613) 951-9480

Deborah Sunter, Directrice adjointe, Programme de l'enquête sur la population active (EPA), (613) 951-4740.

Les chefs d'unité de l'EPA:

- Jean-Marc Lévesque, Analyse (613) 951-2301
- Ross McOrmond, Traitement des données (613) 951-4734
- Royal Gagnéux, Traitement (613) 951-4725

avec l'aide du personnel du Programme de l'enquête sur la population active.

AUTRES SOURCES DES DONNÉES DE L'ENQUÊTE SUR LA POPULATION ACTIVE

CANSIM

La plupart des données publiées dans Statistiques chronologiques sur la population active (n°71-201-XPB au catalogue) peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les utilisateurs voulant obtenir des chiffres par l'intermédiaire de CANSIM peuvent contacter un des centres de consultation de Statistique Canada dont les numéros de téléphone figurent au verso du couvert de cette publication ou en communiquant directement avec la Division du marketing, Statistique Canada, Immeuble R.H. Coats, Ottawa, Ontario, K1A 0T6 (613) 951-8200.

CD-ROM

Un grand éventail de données (incluant celles contenues dans cette publication) sont disponible sur le CD-ROM de la Revue chronologique de la population active (71F0004XCB). Ce CD-ROM se vend à seulement 195 \$. Commandez dès maintenant en contactant le bureau régional de Statistique Canada le plus près de chez vous ou notre bureau de commande sur Internet à order@statcan.ca.

Données non publiées

Des données additionnelles sont également disponibles sur demande par le biais du Programme de l'Enquête sur la population active, selon le principe de recouvrement des coûts.

Le papier utilisé dans la présente publication répond aux exigences minimales de l'«American National Standard for Information Sciences» - «Permanence of Paper for Printed Library Material», ANSI Z39.48 - 1984.

L'enquête sur la population active	353
Définitions et explications	353
Désaisonnalisation	356
Qualité des données	357

Overview

In December, overall labour market conditions were little changed as employment edged up slightly (+30,000) and the unemployment rate remained at 8.0%. Robust job growth especially over the second half of 1998 brought gains for the year to an estimated 453,000 (+3.2%). Employment growth in 1998 represents the best annual performance of the decade. Gains in 1998 were both full-time (+2.7%) and part-time (+5.4%).

The strong job market attracted more people to the labour force in 1998. As a result, the participation rate rose 0.9 percentage points to 65.6%, the first significant annual increase this decade. The employment rate jumped to 60.4% (+1.2 percentage points) by the end of the year, the highest since 1991 and the unemployment rate fell to a nine year low of 8.0% (-0.5 percentage points).

Employment - Emploi

Aperçu

En décembre, les conditions globales du marché de l'emploi ont peu changé, le nombre d'emplois ayant augmenté légèrement (+30 000) et le taux de chômage étant demeuré à 8,0 %. Une forte croissance de l'emploi, particulièrement au cours du deuxième semestre de 1998, a porté l'estimation des gains pour l'année à 453 000 (+3,2 %). La croissance de l'emploi en 1998 représente la meilleure performance annuelle de la décennie. Les gains en 1998 étaient tant dans l'emploi à temps plein (+2,7 %) que dans l'emploi à temps partiel (+5,4 %).

La vigueur du marché du travail a attiré plus de gens dans la population active en 1998. En conséquence, le taux d'activité s'est accru de 0,9 point de pourcentage pour atteindre 65,6 %, soit la première hausse annuelle significative au cours de la décennie. Le taux d'emploi a grimpé à 60,4 % (+1,2 point de pourcentage) à la fin de l'année, soit la plus forte augmentation depuis 1991, et le taux de chômage est tombé à 8,0 % (-0,5 point de pourcentage), son plus bas niveau des neuf dernières années.

Unemployment rate - Taux de chômage

The labour market strengthened for youths in 1998

Despite little change in December, youth employment grew by 145,000 (+7.1%) over the year, the best showing in twenty years. After falling for much of this decade, youth employment improved in 1998 with gains in both full-time (+5.5%) and part-time (+9.1%). The unemployment rate for youths ended the year down 1.4 percentage points to 14.4%.

Le marché du travail s'est raffermi pour les jeunes en 1998

Malgré les faibles changements survenus en décembre, le nombre d'emplois chez les jeunes a augmenté de 145 000 (+7,1 %) au cours de l'année, soit la meilleure performance des 20 dernières années. Après avoir connu une chute pendant la plus grande partie de la présente décennie, l'emploi chez les jeunes s'est amélioré en 1998 et a enregistré des gains dans le travail à temps plein (+5,5 %) et le travail à temps partiel (+9,1 %). Le taux de chômage chez les jeunes a terminé l'année en baisse de 1,4 point pour s'établir à 14,4 %.

The small employment increase in December among adults (+21,000) brings gains over the year to 309,000 (+2.6%). This increase was slightly less than the gain of 348,000 (+3.0%) observed in 1997.

In contrast to 1997 when job growth was led by adult men, employment growth over 1998 was far stronger for adult women (+3.7%) than for adult men (+1.7%). For adult women, nearly two-thirds of the employment gains in 1998 were full-time while for adult men, all of the increase was in full-time jobs.

The strong employment performance of adult women in 1998 pushed their unemployment rate down to 6.6% (-0.6). In contrast, weaker job growth for adult men left their unemployment rate little changed at 7.0% (-0.1).

Private sector employment increases

In December, the number of paid employees in the private sector increased by 100,000. Strong gains over the past four months more than offset losses over the summer and brings growth over the entire year to 361,000 (+4.0%).

While self-employment edged down slightly in December, solid growth over the previous five months brought gains over the year to 120,000 (+4.9%). The increase in self-employment for 1998 continues the upward trend observed throughout this decade.

The number of employees in the public sector dropped by 55,000 in December, leaving this sector down 28,000 (-1.1%) compared to a year ago. The declining trend observed for public sector workers over the previous three years continues for 1998.

La faible augmentation du nombre d'emplois en décembre chez les adultes (+21 000) porte les gains pour l'année à 309 000 (+2,6 %). Cette hausse était légèrement inférieure aux gains de 348 000 (+3,0 %) enregistrés en 1997.

Par contraste à 1997 où la croissance de l'emploi s'est faite principalement chez les hommes adultes, en 1998, la croissance a été beaucoup plus forte chez les femmes adultes (+3,7 %) que chez les hommes (+1,7 %). Chez les femmes adultes, près des deux tiers des gains en 1998 étaient dans le travail à temps plein, tandis que chez les hommes adultes, la totalité de l'augmentation était dans le travail à temps plein.

Cette solide performance de l'emploi chez les femmes adultes en 1998 a entraîné une diminution de leur taux de chômage pour le porter à 6,6 % (-0,6). Par contre, la plus faible croissance de l'emploi chez les hommes adultes a laissé leur taux de chômage presque inchangé à 7,0 % (-0,1).

Hausse de l'emploi dans le secteur privé

En décembre, le nombre d'employés rémunérés dans le secteur privé s'est accru de 100 000. Les gains substantiels des quatre derniers mois ont permis de compenser amplement les pertes survenues au cours de l'été, ce qui porte la progression pour l'ensemble de l'année à 361 000 (+4,0 %).

Bien que le nombre de travailleurs indépendants ait légèrement diminué en décembre, une forte croissance au cours des cinq mois précédents a porté les gains pour l'année à 120 000 (+4,9 %). En 1998, l'augmentation du nombre de travailleurs indépendants a poursuivi la tendance à la hausse observée tout au cours de la présente décennie.

Le nombre d'employé dans le secteur public a chuté de 55 000 en décembre. Cette diminution porte les pertes depuis le début de l'année à 28 000 (-1,1 %). La tendance à la baisse observée au cours des trois années précédentes se poursuit donc en 1998.

In January 1999, the definition of the public and private sectors (class of worker variable) was changed. The method of classifying health care institutions and universities into the public sector is now based on "funding" rather than "ownership". This change increases the number of employees in the public sector in the health and education industries, as all hospitals and universities are now included in this sector. The data on class of worker has been recoded back to 1976, therefore there is no break in the time series.

Provincial summary

Only New Brunswick and Newfoundland showed a significant employment change in December. In New Brunswick, employment rose by 3,000, the fifth consecutive increase. Recent strength more than offsets job losses earlier in the year, bringing gains since December 1997 to 15,000 (+4.7%). During 1998, the unemployment rate declined by 0.9 percentage points and ended the year at 11.6%.

In Newfoundland, employment fell by 4,000 in December, leaving the number of jobs up slightly over the year. An increase in labour force participation during 1998 pushed the unemployment rate up by 1.4 percentage points to end the year at 18.7%.

There was little employment change in 1998 in the other Atlantic provinces. By year-end, employment in Prince Edward Island was just slightly below its December 1997 level (-1.3%) and the unemployment rate ended the year at 15.4% (+1.5). In Nova Scotia, employment ended 1998 up slightly (+0.9%) and the unemployment rate fell 0.8 percentage points to 10.6%.

Québec ended the year with gains in employment totaling 101,000 (+3.1%). During 1998, the unemployment rate fell by 0.4 percentage points to close the year at 9.9%, the lowest since 1990.

En janvier 1999, la définition des secteurs public et privé pour les estimations selon la catégorie de travailleurs a été modifiée. Ainsi, le concept de «financement» est maintenant utilisé à titre de base de classification pour les institutions de soins de santé et les universités dans le secteur public, et non plus le concept de «propriété». Ce changement a pour effet d'accroître le nombre d'employés dans le secteur public des branches de la santé et de l'enseignement, puisque tous les employés d'hôpitaux et d'université sont maintenant classés dans le secteur public. Les estimations selon la catégorie de travailleurs ont été révisées jusqu'en 1976. Il n'y a donc pas de bris de séries dans les tableaux portant sur cette variable.

Résumé provincial

Seuls le Nouveau-Brunswick et Terre-Neuve ont affiché un changement significatif de l'emploi en décembre. Au Nouveau-Brunswick, l'emploi s'est accru de 3 000, soit une cinquième hausse consécutive. La croissance des derniers mois compense amplement les pertes survenues plus tôt au cours de l'année et porte les gains depuis décembre 1997 à 15 000 (+4,7 %). En 1998, le taux de chômage a diminué de 0,9 point de pourcentage et s'établissait à 11,6 % à la fin de l'année.

À Terre-Neuve, l'emploi a diminué de 4 000 en décembre, laissant le nombre d'emplois en légère hausse par rapport au début de l'année. Une augmentation de l'activité en 1998 a entraîné une hausse du taux de chômage de 1,4 point de pourcentage pour le porter à 18,7 % à la fin de l'année.

Il y a eu peu de changements au niveau de l'emploi en 1998 dans les autres provinces de l'Atlantique. À la fin de l'année, l'emploi à l'Île-du-Prince-Édouard était légèrement inférieur au niveau de décembre 1997 (-1,3 %) et le taux de chômage s'élevait à 15,4 % (+1,5). En Nouvelle-Écosse, l'emploi a clôturé 1998 en hausse légère (+0,9 %) et le taux de chômage a diminué de 0,8 point de pourcentage pour s'établir à 10,6 %.

Le Québec a terminé l'année avec des gains d'emplois totalisant 101 000 (+3,1 %). En 1998, le taux de chômage a diminué de 0,4 point de pourcentage pour clore l'année à 9,9 %, le plus faible taux depuis 1990.

Employment in Ontario grew strongly during 1998, up 211,000 (+3.8%). This robust employment growth during 1998 pushed the unemployment rate down 0.8 percentage points to end the year at 6.9%, the lowest since September 1990.

In Manitoba, employment increased by 11,000 (+2.0%) during 1998. However, the unemployment rate was little changed at 5.9% as the increase in employment was accompanied by growth in labour force participation.

After strong job growth in Saskatchewan during 1997, employment in 1998 was virtually unchanged (+0.3%). During 1998, the unemployment rate increased by 1.3 percentage points to end the year at 6.3%, the result of an increase in labour force participation.

In Alberta, overall employment continued to increase in 1998, up 50,000 (+3.4%). This employment gain, represents about the same rate of growth as in 1997. Although the province experienced robust job growth in 1998, an increase in the number of unemployed people kept the unemployment rate almost unchanged at 5.7%.

Following a weak labour market in 1997, employment in British Columbia strengthened during 1998, up 58,000 (+3.2%). The unemployment rate edged down to 8.2% (-0.5).

Industry

IMPORTANT: a new industry classification system, the North American Industry Classification (NAICS) has been implemented for the release of the January 1999 estimates. The industry time series of the Labour Force Survey are now based on this classification system. For further information on NAICS, consult the Spring 1999 release of the Labour Force Update.

L'emploi en Ontario s'est fortement accru au cours de 1998, ayant enregistré une augmentation de 211 000 (+3,8 %). Cette forte croissance de l'emploi en 1998 a entraîné une diminution de 0,8 point de pourcentage du taux de chômage, qui s'établissait à la fin de l'année à 6,9 %, le plus faible niveau depuis septembre 1990.

Au Manitoba, l'emploi s'est accru de 11 000 (+2,0 %) en 1998. Cependant, le taux de chômage a peu varié, s'établissant à 5,9 %, la croissance de l'emploi ayant été accompagnée d'une augmentation de l'activité.

Après une forte augmentation de l'emploi en Saskatchewan en 1997, le nombre d'emplois en 1998 est demeuré pratiquement le même (+0,3 %). Au cours de 1998, le taux de chômage a augmenté de 1,3 point de pourcentage pour terminer l'année à 6,3 %, dû à une hausse de l'activité.

En Alberta, l'emploi total a continué de progresser en 1998, affichant une hausse de 50 000 (+3,4 %). Ce gain, représente à peu près le même taux de croissance que celui enregistré en 1997. Bien que la province ait connu une forte croissance de l'emploi en 1998, une augmentation du nombre de chômeurs a maintenu le taux de chômage presque inchangé à 5,7 %.

Suite à un faible marché du travail en 1997, l'emploi en Colombie-Britannique s'est raffermi en 1998, ayant augmenté de 58 000 (+3,2 %). Le taux de chômage a diminué et s'est établi à 8,2 % (-0,5 point).

Branches d'activité

IMPORTANT : une nouvelle classification industrielle, le Système de classification des industries de l'Amérique du Nord (SCIAN) a été adopté lors de la diffusion des données de janvier 1999. Les séries chronologiques de l'Enquête sur la population active utilisent désormais ce système de classification. Pour plus de renseignements sur SCIAN, veuillez consulter le numéro du printemps 1999 de la revue Le point sur la population active.

Employment Growth by Province – Croissance de l'emploi par province

(December 1997 to December 1998 – Décembre 1997 à décembre 1998)

**Unemployment rates by province – Taux de chômage par province**

APPENDIX

The Labour Force Survey

The statistics contained in this report are based on information obtained through a sample survey of households. Interviews are carried out in about 52,000 representative households across the country (excluding the Yukon and Northwest Territories), involving some 96,000 respondents.

The Labour Force Survey, started in November 1945, was taken at quarterly intervals until November 1952. It has been carried out monthly since then. The information generated by the survey has expanded considerably over the years with a major redesign of the survey content in 1976 and again in 1997, and provides a rich and detailed picture of the Canadian labour market. Details of the latest changes are available in a document entitled "The Labour Force Survey: Development of a new questionnaire for 1997, found on the Internet under Research Papers in the virtual library of Statistics Canada (www.statcan.ca). Details of these changes are available on request from the Labour Force Survey Sub-Division, Statistics Canada, Ottawa, K1A 0T6.

The sample used in the Labour Force Survey has been designed to represent all persons in the population 15 years of age and over residing in the provinces of Canada, with the exception of the following: persons living on Indian reserves, full-time members of the armed forces and people living in institutions (for example, inmates of penal institutions and patients in hospitals or nursing homes who have resided in the institution for more than 6 months).

Monthly estimates of employment, unemployment and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

For detailed information on the methodology of the Labour Force Survey, see the publication Methodology of the Canadian Labour Force Survey (cat. 71-526).

For detailed information on the LFS questionnaire, see the document Guide to the Labour Force Survey on the Labour Force Historical Review on CD-ROM, or in the Statistics Canada virtual library on the World Wide Web.

Collecting the Data

Data collection is carried out during the week following the reference week. Statistics Canada interviewers contact each of the households in the sample through personal and/or telephone interviews to obtain the information needed to produce the labour force data. As mentioned earlier, there are approximately 52,000 households interviewed each month. Once a household is selected, it remains in the sample for a period of six months. Each interviewer contacts approximately 75 designated dwellings (the individual assignment size varies by type of area) and conducts a personal interview in all dwellings where interviews are being conducted for the first time. In most areas, provided the respondent agrees, subsequent interviews may be conducted by telephone, an interview technique which has been shown to have no discernable impact on the data and which offers significant savings in time and cost.

Definitions and Explanations

Labour Force

The labour force is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

APPENDICE

L'enquête sur la population active

Les statistiques publiées ici sont fondées sur une enquête mensuelle menée auprès d'environ 52 000 ménages représentatifs d'un bout à l'autre du Canada, soit quelque 96 000 répondants (à l'exception du Yukon et des Territoires du Nord-Ouest).

L'enquête sur la population active, lancée en novembre 1945, a eu lieu tous les trois mois jusqu'à novembre 1952. Depuis lors, elle a lieu tous les mois. L'information générée par l'enquête s'est considérablement accrue au cours des années grâce à un remaniement majeur de l'enquête en 1976, suivi d'un autre en 1997, et fournit une image riche et détaillée du marché du travail canadien. Les détails concernant les derniers changements se trouvent dans le document «L'Enquête sur la population active: élaboration d'un nouveau questionnaire pour 1997», disponible sur Internet sous Documents de recherche dans la Bibliothèque virtuelle de Statistique Canada (www.statcan.ca). On peut obtenir des détails sur ces changements en s'adressant à la Sous-division de l'enquête sur la population active, Statistique Canada, Ottawa, K1A 0T6.

L'échantillon retenu aux fins de l'enquête sur la population active représente toutes les personnes de 15 ans et plus résidant dans les provinces du Canada, à l'exception des personnes vivant dans des réserves indiennes, des membres à plein temps des Forces armées et des pensionnaires d'institutions (par exemple les détenus de prison et les malades séjournant à l'hôpital ou dans une maison de repos pour plus de 6 mois).

Les estimations mensuelles de l'emploi, du chômage et des inactifs se rapportent à une semaine bien précise chaque mois, soit normalement celle où tombe le quinzième jour du mois.

Pour des renseignements d'ordre méthodologique de l'Enquête sur la population active, veuillez consulter la publication intitulée Méthodologie de l'Enquête sur la population active du Canada (n° 71-526 au catalogue).

Des renseignements détaillés sur le questionnaire de l'EPA sont contenus dans le document Guide de l'Enquête sur la population active dans, Revue chronologique de la population active du CD-ROM, ou encore dans la bibliothèque virtuelle de Statistique Canada sur le World Wide Web.

La collecte des données

La collecte des données a lieu au cours de la semaine qui suit la semaine de référence. Les intervieweurs de Statistique Canada communiquent avec les occupants de chacun des ménages de l'échantillon, en personne et (ou) par téléphone, afin de recueillir les renseignements nécessaires pour produire les données sur la population active. Tel que décrit ci-dessus, environ 52 000 ménages sont interviewés chaque mois. Lorsqu'un ménage est choisi, il demeure dans l'échantillon pour une durée de six mois. Chaque intervieweur se met en contact avec les occupants d'environ 75 logements choisis (la tâche individuelle varie selon le genre de région). Lorsqu'il s'agit d'un ménage interviewé pour la première fois, l'intervieweur fait une visite sur place. Dans la majorité des régions, les interviews subséquentes peuvent être réalisées par téléphone, à condition que l'enquêté y consente; cette technique ne semble pas avoir d'effet marqué sur les données et elle permet d'épargner beaucoup de temps et d'argent.

Définitions et explications

Population active

La population active comprend les membres de la population civile hors institution âgés de 15 ans et plus qui avaient un emploi (personnes occupées) ou étaient en chômage pendant la semaine de référence.

Employed

Employed persons are those who, during the reference week:

- a) did any work (see note below) at all
- b) had a job but were not at work due to:
 - own illness or disability
 - personal or family responsibilities
 - labour dispute
 - vacation
 - other reason not specified above (excluding persons on layoff, between casual jobs, and those with a job to start at a future date).

Note:

Work includes any work for pay or profit, that is, paid work in the context of an employer-employee relationship, or self-employment. It also includes unpaid family work where unpaid family work is defined as unpaid work which contributed directly to the operation of a farm, business or professional practice owned by a related member of the household

Employed full-time

A person is considered to be employed full-time if his/her usual hours at the main job are greater than 29 hours per week.

Employed part-time

When the number of hours worked at the main job is usually less than 30 hours per week then he/she is considered to be employed part-time.

Unemployed

Unemployed persons are those who, during the reference week:

- a) were without work, had actively looked for work in the past four weeks (ending with reference week), and were available for work (see note below);
- b) had not actively looked for work in the past four weeks but had been on layoff (see note below) and were available for work;
- c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Notes:

1. Persons in this group meeting the following criteria are regarded as available:
 - i. were full-time students seeking part-time work who also met condition (ii) below. (Full-time students looking for full-time work are classified as not available for work in the reference week.)
 - ii. reported that there was no reason why they could not take a job in reference week, or if they could not take a job it was because of "own illness or disability", "personal or family responsibilities", or "already had a job".
2. Persons are classified as being on temporary layoff only when they expect to return to the job from which they were laid off.

Personnes occupées

Les personnes occupées sont celles qui, au cours de la semaine de référence:

- a) ont fait un travail (voyez la note en bas) quelconque
- b) avaient un emploi mais n'étaient pas au travail pour l'une des raisons suivantes:
 - maladie ou invalidité (de l'enquête)
 - obligations personnelles ou familiales
 - conflit de travail
 - vacances
 - autre raison non précisée ci-dessus (n'inclut pas les personnes mises à pied, celles qui étaient inactives entre deux emplois occasionnels et celles qui avaient un emploi devant commencer à une date ultérieure).

Note:

On entend par "travail" tout travail fait contre rémunération ou en vue d'un bénéfice, c'est-à-dire le travail fait contre rémunération pour un employeur ou à son propre compte. Il peut également s'agir d'un travail familial non rémunéré, c'est-à-dire d'un travail non rémunéré qui contribue directement à l'exploitation d'une ferme, d'une entreprise ou d'un bureau professionnel, qui est possédé ou exploité par un membre apparenté du ménage.

L'emploi à temps plein

Une personne est considérée comme un employé à temps plein si elle travaille habituellement plus de 29 heures par semaine à son emploi principal.

L'emploi à temps partiel

Une personne est considérée comme un employé à temps partiel si elle travaille habituellement moins de 30 heures par semaine à son emploi principal.

Chômeurs

Les chômeurs sont les personnes qui, au cours de la semaine de référence:

- a) étaient sans emploi, avaient activement cherché du travail au cours des quatre dernières semaines (y compris la semaine de référence) et étaient prêtes à travailler (voyez la note en bas);
- b) n'avaient pas activement cherché de travail au cours des quatre dernières semaines, mais avaient été mises à pied (voir la note en bas) et étaient prêtes à travailler;
- c) n'avaient pas activement cherché de travail au cours des quatre dernières semaines, mais devaient commencer un nouvel emploi dans quatre semaines ou moins à compter de la semaine de référence, et étaient prêtes à travailler.

Notes:

1. On considère comme prêtes à travailler les personnes de ce groupe qui:
 - i. Étudiaient à plein temps tout en cherchant du travail à temps partiel et qui répondaient au critère (ii) ci-dessous. (Les étudiants à plein temps qui cherchaient du travail à plein temps ne sont pas considérés comme ayant été prêts à travailler pendant la semaine de référence).
 - ii. Ont déclaré qu'il n'y avait aucune raison pour laquelle elles ne pouvaient prendre un emploi pendant la semaine de référence ou ne pouvaient en prendre un en raison "de maladie ou invalidité", "d'obligations personnelles ou familiales", ou "parce qu'elles avaient déjà un emploi".
2. On considère comme mises à pied temporaire les personnes qui s'attendent à réintégrer l'emploi qu'elles occupaient avant d'être mises à pied.

Not in the Labour Force

Those persons in the civilian non-institutional population 15 years of age and over who, during the reference week, were neither employed nor unemployed.

Unemployment Rate

The unemployment rate represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number unemployed in that group expressed as a percentage of the labour force for that group.

Participation Rate

The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force in that group expressed as a percentage of the population for that group.

Employment Rates (formerly the Employment/ Population Ratio)

The employment rate represents the number of persons employed expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, marital status, etc.) is the number employed in that group expressed as a percentage of the population for that group.

Part-time Rate

The part-time rate represents the number of persons employed part-time expressed as a percentage of the employed. The part-time rate for a particular group (age, sex, marital status, etc.) is the number employed part-time in that group expressed as a percentage of the employed for that group.

Industry and Occupation

The Labour Force Survey provides information about the occupation and industry attachment of persons employed, unemployed and not in the labour force who have held a job in the past twelve months.

Family Status

A family is defined as "a group of two or more persons who are living together in the same dwelling and who are related by blood, marriage or adoption". A person living alone or who is related to no one else in the dwelling where he/she lives is classified as an "unattached individual". The head of a family is determined by the respondent's perception of headship and as such is solely a statistical device which has no economic connotation. (A more detailed description of the derivation of family data is available on request.)

Rounding

Estimates published by the Labour Force Survey are rounded to the nearest hundreds and expressed in thousands but all derived values (totals, averages, rates, ratios...) are calculated from unrounded figures, except for seasonally adjusted estimates. Therefore, the sum of individual rounded items may not equal the total.

Inactifs

Il s'agit de la partie de la population civile hors institution âgée de 15 ans et plus qui était ni occupée ni en chômage pendant la semaine de référence.

Taux de chômage

Le taux de chômage représente le nombre de chômeurs exprimé en pourcentage de la population active. Le taux de chômage d'un groupe particulier (âge, sexe, état matrimonial, etc.) est le nombre de chômeurs dans ce groupe, exprimé en pourcentage de la population active dans le même groupe.

Taux d'activité

Le taux d'activité représente la population active exprimée en pourcentage de la population de 15 ans et plus. Le taux d'activité d'un groupe particulier (âge, sexe, état matrimonial, etc.) est la population active dans ce groupe exprimée en pourcentage de la population dans le même groupe.

Taux d'emploi (antérieurement nommé rapport emploi-population)

Le taux d'emploi représente le nombre de personnes occupées exprimé en pourcentage de la population de 15 ans et plus. Le taux d'emploi d'un groupe particulier (âge, sexe, état matrimonial, etc.) est le nombre de personnes occupées dans ce groupe, exprimé en pourcentage de la population dans le même groupe.

Taux de temps partiel

Le taux de temps partiel représente le nombre de personnes occupées à temps partiel exprimé en pourcentage du nombre de personnes occupées. Le taux de temps partiel d'un groupe particulier (âge, sexe, état matrimonial, etc.) est le nombre de personnes occupées à temps partiel dans ce groupe, exprimé en pourcentage du nombre de personnes occupées dans le même groupe.

Branche d'activité et profession

L'enquête sur la population active fournit des renseignements sur la profession et la branche d'activité des personnes occupées, des chômeurs et de la population inactive qui ont occupé un emploi au cours des douze derniers mois.

La situation familiale

Une famille est "un groupe de deux personnes ou plus qui vivent ensemble dans le même logement et qui sont apparentées par le sang, le mariage ou l'adoption". Une personne qui vit seule ou qui n'est apparentée à aucun occupant du logement où il (elle) demeure est classée comme "personne seule". On établit qui est le "chef de famille" en demandant à l'enquêté qui est, selon lui, la personne qui joue ce rôle. Ce concept n'a aucune connotation économique; il ne s'agit que d'un mécanisme statistique. (On peut obtenir sur demande une description plus détaillée du calcul des données sur les familles.)

Arrondissement

Les estimations publiées par l'enquête sur la population active sont publiées en milliers et arrondies en centaines mais toutes les valeurs dérivées (totaux, moyennes, taux, ratios...) sont calculées à partir de chiffres non arrondis, à l'exception des estimations désaisonnalisées. Ainsi, la somme des composantes individuelles arrondies n'est pas toujours égale au total publié.

Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contains irregular as well as longer-term cyclical fluctuations.

The seasonal adjustment program is a complicated computer program which differentiates between these seasonal, cyclical and irregular movements in a series over a number of years and, on the basis of past movements, estimates appropriate seasonal factors for current data. On an annual basis, the historic series of seasonally adjusted data is revised in light of the most recent information on changes in seasonality.

The seasonally adjusted series in this publication have been derived using the X-11-ARIMA method developed at Statistics Canada in 1980 to improve the accuracy of seasonal factor estimates. This method is a modified version of the X-11 variant of the Census Method II seasonal adjustment program of the U.S. Bureau of the Census. The modification involves using ARIMA (autogressive integrated moving average) models to produce twelve-month projections of the unadjusted data series; the projected data are then added to the series for purposes of seasonal adjustment. For a detailed description of the procedure, the reader is referred to the technical paper "The X-11 ARIMA/88 Seasonal Adjustment Method". Information regarding seasonal adjustment is also available from the Labour Force Survey Sub-division or the Time Series Research and Analysis Division, Statistics Canada.

Seasonally adjusted estimates of the labour force are derived by summing seasonally adjusted employment and seasonally adjusted unemployment.

Seasonally adjusted employment and unemployment totals for Canada are derived by the summation of the appropriate seasonally adjusted figures for men 15-24, men 25 to 54, men 55 and over, women 15-24, women 25 to 54 and women 55 and over.

A harmonization process is applied to the seasonally adjusted series of all national and provincial employment series to correspond to the seasonally adjusted total employment series.

Seasonally adjusted unemployment rates are the seasonally adjusted unemployment levels expressed as a per cent of the seasonally adjusted labour force (i.e. the sum of the seasonally adjusted employment and unemployment levels).

The seasonally adjusted participation rates are the seasonally adjusted labour force estimates (i.e. the sum of the seasonally adjusted employment and unemployment levels) expressed as a per cent of the population.

The seasonally adjusted employment rates are the seasonally adjusted employment levels expressed as a per cent of the population.

The seasonally adjusted part-time rates are the seasonally adjusted part-time employment levels expressed as a per cent of the seasonally adjusted employment levels.

Désaisonnalisation

Les fluctuations des séries chronologiques économiques sont causées par des mouvements saisonniers, cycliques et irréguliers. Une série désaisonnalisée est une série dont on a éliminé les effets des mouvements saisonniers. Ces derniers sont causés par des événements annuels réguliers comme les changements de température, les vacances, les cycles agricoles, de productions et de ventes au détail durant la période de Noël et de Pâques. Il convient de noter que la série désaisonnalisée contient à la fois des fluctuations irrégulières et des fluctuations cycliques à long terme.

Le programme de désaisonnalisation est un programme informatique complexe qui permet de déceler les mouvements saisonniers, cycliques et irréguliers sur une période de plusieurs années et d'estimer, à la lumière des mouvements passés, les coefficients saisonniers appropriés pour l'année en cours. Sur une base annuelle, chaque série chronologique des données désaisonnalisées est révisée à la lumière des renseignements les plus récents sur les fluctuations saisonnières.

Les séries désaisonnalisées présentées dans cette publication ont été calculées à l'aide de la méthode X-11-ARMMI, mise au point à Statistique Canada en 1980 afin d'améliorer la précision des estimations des facteurs saisonniers. Cette méthode est une modification de la variante X-11 du programme de désaisonnalisation "Census Method II" du Bureau du recensement des États-Unis. Cette modification comprend l'utilisation de modèles ARMMI (autorégressif à moyennes mobiles intégré) afin d'établir des extrapolations de douze mois de la série d'origine; on désaisonnalise alors la série en lui ajoutant les valeurs extrapolées. Le lecteur intéressé trouvera une description détaillée de cette procédure dans le document technique intitulé "La méthode de désaisonnalisation X-11 ARMMI/88". On peut également obtenir des renseignements sur la désaisonnalisation en s'adressant à la Sous-division de l'enquête sur la population active ou à la Division des séries chronologiques - recherche et analyse, de Statistique Canada.

On obtient les estimations désaisonnalisées de la population active en faisant la somme des données désaisonnalisées sur l'emploi et le chômage.

Les totaux désaisonnalisés de l'emploi et du chômage pour le Canada sont tirés de la somme des chiffres désaisonnalisés pour les hommes âgés de 15 à 24 ans, de 25 à 54 ans, de 55 ans et plus ainsi que les femmes des trois même groupes d'âge.

Un processus d'harmonisation est appliqué aux séries désaisonnalisées sur toutes les séries de l'emploi au niveau national et provincial afin qu'elles concordent avec celles sur l'emploi total.

Les taux de chômage désaisonnalisés représentent les niveaux désaisonnalisés du chômage exprimés en pourcentage des estimations désaisonnalisées de la population active (c.-à-d. la somme des niveaux désaisonnalisés de l'emploi et du chômage).

Les taux d'activité désaisonnalisés correspondent aux estimations désaisonnalisées de la population active (c.-à-d. la somme des niveaux désaisonnalisés de l'emploi et du chômage) exprimées en pourcentage de la population.

Les taux d'emploi désaisonnalisés sont les niveaux désaisonnalisés de l'emploi exprimés en pourcentage de la population.

Les taux à temps partiel désaisonnalisés sont les niveaux désaisonnalisés de l'emploi à temps partiel exprimés en pourcentage des niveaux désaisonnalisés de l'emploi.

Seasonally adjusted unemployment, participation and employment rates are calculated using rounded to hundreds, seasonally adjusted data.

It should be noted that the seasonally adjusted series are revised each year to take into account current data and to generate new forecast factors for the next twelve months. The data are therefore subject to slight revisions in future issues of this publication.

DATA QUALITY

Non-Sampling Errors

Errors which are not related to sampling may occur at almost every phase of a survey operation. Interviewers may misunderstand instructions, respondents may make errors in answering questions, the answers may be incorrectly entered on the questionnaire and errors may be introduced in the processing and tabulation of the data. These are all examples of non-sampling errors.

Over a large number of observations, randomly occurring errors will have little effect on estimates derived from the survey. However, errors occurring systematically will contribute to biases in the survey estimates. Considerable time and effort is made to reduce non-sampling errors in the survey. Quality assurance measures are implemented at each step of the data collection and processing cycle to monitor the quality of the data. These measures include the use of highly skilled interviewers, extensive training of interviewers with respect to the survey procedures and questionnaire, observation of interviewers to detect problems of questionnaire design or misunderstanding of instructions, edits to ensure that data entry errors are minimized and coding and edit quality checks to verify the processing logic.

Survey Response

One major source of non-sampling error is the effect of non-response on survey results. Non-response is made up of two components: item non-response, and total non-response. Several methods are used to compensate for item non-response, such as deriving a suitable response based on other information collected in the survey, using data obtained from the respondent during a previous interview, or choosing a response from a respondent with similar demographic and socio-economic characteristics. Total non-response is handled by either using information from a previous interview or by weighting the results to compensate for the missing data.

The non-response rate for the Labour Force Survey is among the lowest in the world for a survey of this type. In 1997 the rate averaged about 6%.

Sampling Errors

The survey produces estimates based on information collected from and about a sample of individuals. Somewhat different estimates might have been obtained if a complete census had been taken using the same questionnaire, interviewers, supervisors, processing methods, etc. as those actually used in the survey. The difference between the estimates obtained from the sample and those resulting from a complete count taken under similar conditions is called the sampling error of the estimate. Since it is unavoidable that estimates from a sample survey are subject to sampling error, sound statistical practice calls for researchers to provide users with some indication of the magnitude of this sampling error. Approximate measures of sampling error accompany Labour Force Survey products and users are urged to make use of them while analysing the data.

Les taux de chômage, d'activité et d'emploi désaisonnalisés sont fondés sur des données désaisonnalisées arrondies en centaines.

Il importe de noter que les données désaisonnalisées sont révisées chaque année afin de tenir compte des données courantes et produire des coefficients d'extrapolation prospective pour les 12 prochains mois. Les données d'extrapolation prospective seront l'objet de légères révisions dans les éditions ultérieures de la présente publication.

QUALITÉ DES DONNÉES

Erreurs non dues à l'échantillonnage

Des erreurs qui ne sont pas reliées à l'échantillonnage peuvent se produire à presque toutes les étapes des opérations d'enquête. Les intervieweurs peuvent avoir mal compris les instructions, les enquêtés peuvent se tromper en répondant aux questions, les réponses peuvent être mal consignées sur les questionnaires et des erreurs peuvent être faites au moment du traitement et de la totalisation des données. Il s'agit là d'autant d'erreurs non dues à l'échantillonnage.

Lorsque le nombre d'observations est élevé, les erreurs aléatoires ont peu d'effet sur les estimations calculées à partir des résultats de l'enquête. Toutefois, les erreurs systématiques contribuent à biaiser les estimations. À chacune des étapes du cycle de collecte et de traitement des données, on applique des mesures d'assurance de la qualité pour contrôler la qualité des données. Au nombre de ces mesures figurent le recours à des intervieweurs hautement qualifiés, une formation poussée des intervieweurs concernant les procédures et le questionnaire de l'enquête, l'observation des intervieweurs en vue de cerner les problèmes liés à la conception du questionnaire ou à une mauvaise compréhension des instructions, des contrôles visant à réduire au minimum les erreurs de saisie des données ainsi que des vérifications du codage et des contrôles ayant pour but d'attester de la logique du traitement.

Taux de réponse à l'enquête

L'une des principales sources d'erreurs non dues à l'échantillonnage est l'effet de la non-réponse sur les résultats de l'enquête. Il y a deux sortes de non-réponse: la non-réponse à une ou plusieurs questions et la non-réponse totale. On a recours à diverses méthodes pour remédier au premier type de non-réponse. On peut imputer une réponse qui s'inspire d'autres données recueillies dans l'enquête, utiliser les données d'une interview antérieure ou prendre la réponse d'un enquêté qui présente des caractéristiques démographiques et socio-économiques semblables. Pour pallier la non-réponse totale, on utilise les données d'une interview antérieure ou on effectue une pondération pour compenser l'absence de données.

Le taux de non-réponse à l'enquête sur la population active est l'un des plus faibles au monde pour une enquête de ce genre. En 1997 le taux moyen était environ 6 %.

Erreurs d'échantillonnage

L'enquête permet de produire des estimations fondées sur les renseignements recueillis auprès d'un échantillon de personnes et concernant ces dernières. Les estimations obtenues seraient peut-être sensiblement différentes si on réalisait un recensement exhaustif en reprenant par exemple le même questionnaire, les mêmes intervieweurs et superviseurs et les mêmes méthodes de traitement que pour l'enquête elle-même. L'écart entre les estimations découlant de l'échantillon et celles que donnerait un dénombrement exhaustif réalisé dans des conditions comparables est appelé erreur d'échantillonnage de l'estimation. Comme il est impossible de soustraire à l'erreur d'échantillonnage les estimations découlant d'une enquête sur échantillon, les chercheurs, soucieux d'appliquer de saines pratiques sur le plan statistique, fournissent aux utilisateurs certaines indications quant à l'importance de l'erreur d'échantillonnage. Les produits de l'Enquête sur la population active sont assortis de mesures approximatives de l'erreur d'échantillonnage; nous recommandons vivement aux utilisateurs d'en tenir compte au moment d'analyser les données.

A measure of the sampling error is the standard error. This measurement is based on the idea of selecting several samples, although in a survey only one sample is drawn and information is collected on units in that sample. Using the sampling plan, if a large number of samples were to be drawn from the same population, then about 68 % of the samples would produce a sample estimate within one standard error of the census value and in about 95 % of the samples it will be within two standard errors of the census value.

Sampling variability can also be expressed relative to the estimate itself. The standard error as a percentage of the estimate is called the coefficient of variation (CV) or the relative standard error. For LFS estimates, the CV is used to give an indication of the uncertainty associated with the estimates. Probability statements can also be made about CVs; for example, if an estimate is 100,000 with a CV of 7 %, the true (census) value will lie between 93,000 and 107,000 with 68 % certainty, and between 86,000 and 114,000 with 95 % certainty.

Small CVs are desirable since the smaller the CV the smaller the sampling variability is relative to the estimate. The CV depends on the size of the estimate, the sample size that the estimate is based on, and the distribution of the sample. Of two estimates, the one with the larger sample will likely have a smaller sampling error; and, of two estimates of the same size the one referring to a characteristic that is more clustered geographically will have a larger variability associated with it. In addition, estimates relating only to age and sex are usually more reliable than other estimates of comparable sample size because, in the LFS, the sample is calibrated by age, sex and geographic region to independent sources.

Approximate sampling variability tables

The following tables give approximate coefficients of variation as a function of the size of the estimate and geography. The rows give the geographic area of the estimate while the columns indicate the resulting level of accuracy in terms of the CV, given the size of the estimate. To determine the CV for an estimate of size x in an area A , look across the row for area A , find the estimate that is less than or equal to x . Then the title of the column will give the approximate CV. For example, to determine the sampling error for an estimate of 42.0 thousand unemployed in Manitoba in August 1996, we find the closest but smaller estimate of 15.0 thousand giving a CV of 10 %. Therefore, the estimate of 42,000 unemployed in Manitoba has a CV of roughly 10 %.

The tables are supplied as a rough guide to the sampling variability. The sampling variability is modelled so that, given an estimate, approximately 75 % of the CVs will be less than or equal to the CVs derived from the table. There will, however, be 25 % of the estimates that will have a CV somewhat higher than that given by the table.

Une mesure de l'erreur d'échantillonnage est l'erreur-type, établie sur le principe de la sélection d'échantillons multiples. On notera toutefois que dans les faits, un seul échantillon est prélevé dans une enquête et que les renseignements recueillis portent sur les unités de cet échantillon. Selon le plan d'échantillonnage, si l'on prélevait un grand nombre d'échantillons dans la même population, pour environ 68 % des échantillons, l'écart entre l'estimation d'échantillon et la valeur du recensement serait inférieur à une unité d'erreur-type, et pour environ 95 % des échantillons, l'écart serait inférieur à deux unités d'erreur-type.

La variabilité de l'échantillonnage peut aussi être définie par rapport à l'estimation elle-même. Lorsqu'elle est exprimée en pourcentage de l'estimation, l'erreur-type est appelée coefficient de variation (CV) ou erreur-type relative. Dans le cas des estimations de l'EPA, on se sert du CV pour donner un aperçu du degré d'incertitude associé aux estimations. Il est possible également de présenter, relativement aux CV, des mesures de probabilité. Par exemple, pour une estimation de 100 000 avec un CV de 7 %, la valeur vraie (d'un recensement) se situera entre 93 000 et 107 000, avec un degré de certitude de 68 %, et entre 86 000 et 114 000, avec un degré de certitude de 95 %.

De faibles CV sont préférables; en effet, moins le CV sera élevé, plus faible sera la variabilité de l'échantillonnage par rapport à l'estimation. Le CV est fonction de la taille de l'estimation, de la taille de l'échantillon sur lequel se fonde l'estimation ainsi que de la répartition de l'échantillon. De deux estimations données, celle qui se fonde sur l'échantillon le plus important présentera probablement l'erreur d'échantillonnage la plus faible. Pour deux estimations de taille identique, celle qui a trait à une caractéristique plus regroupée géographiquement aura une variabilité plus prononcée. De plus, les estimations qui ont trait uniquement à l'âge et au sexe sont habituellement plus fiables que d'autres estimations fondées sur des échantillons de taille comparable parce que l'échantillon de l'EPA est calibré en fonction de l'âge, du sexe et de la région géographique, par rapport à des sources indépendantes.

Tableaux des degrés approximatifs de variabilité de l'échantillonnage

Les tableaux qui suivent fournissent des coefficients de variation approximatifs selon la taille des estimations et la région géographique. Les lignes correspondent à la région de l'estimation et les colonnes, au degré de précision exprimé en CV, selon la taille de l'estimation. Pour déterminer le CV d'une estimation x dans la région A , suivez la ligne de la région A jusqu'à l'estimation la plus proche de x sans la dépasser. Le titre de la colonne indiquera le CV approximatif. Par exemple, pour connaître l'erreur d'échantillonnage d'une estimation de 42 000 chômeurs au Manitoba en août 1996, on constate que l'estimation inférieure la plus proche, de 15 000, donne un CV de 10 %. L'estimation de 42 000 chômeurs aura donc un CV d'environ 10 %.

Les tableaux donnent une idée approximative de la variabilité de l'échantillonnage. Cette dernière est modélisée pour que le CV soit inférieur ou égal au CV du tableau dans environ 75 % des cas, pour une estimation donnée. Dans 25 % des cas, l'estimation sera néanmoins légèrement plus élevée que celle indiquée au tableau.

Weighting

The data are weighted to independently derived population estimates produced each month by province, age, and sex. These estimates are shown in a number of tables in this report and are subject to revision after each Census. The weighting process takes into account non-response, growth in sample size and changes in the distribution of dwellings within provinces. For further information about the weighting process, contact Labour Force Survey Sub-Division, Statistics Canada, Ottawa, K1A 0T6.

Pondération

Les données sont pondérées en fonction d'estimations démographiques indépendantes déterminées chaque mois par province, par âge et par sexe. Ces estimations sont présentées dans un certain nombre de tableaux de la présente publication et font l'objet d'une révision après chaque recensement. Le processus de pondération tient compte de la non-réponse, de l'expansion de l'échantillon et des variations dans la répartition des logements dans les diverses provinces. Pour de plus amples renseignements au sujet du processus de pondération, consulter la Sous-division de l'enquête sur la population active, Statistique Canada, Ottawa, K1A 0T6.

Reference and Release Dates

As mentioned previously, the estimates derived from the Labour Force Survey refer to a specific week each month. The following table gives the reference weeks and the release dates for the years 1998, 1999 and 2000.

Dates de référence et du communiqué

Comme nous l'avons mentionné plus haut, les estimations tirées de l'enquête sur la population active se rapportent à une semaine précise de chaque mois. Le tableau ci-après indique les semaines de référence et les dates du communiqué pour les années 1998, 1999 et 2000.

Reference Dates - Dates de référence	2000	1999	1998
week ending - semaine se terminant le

Statistics Canada

THANK YOU FOR YOUR ORDER!

Statistics Canada Statistique Canada

Canada

For and About Businesses Serving the Business of Canada ...

At last, current data and expert analysis on this VITAL sector in one publication!

The services sector now dominates the industrial economies of the world. Telecommunications, banking, advertising, computers, real estate, engineering and insurance represent an eclectic range of services on which all other economic sectors rely.

Despite their critical economic role, however, it has been hard to find out what's happening in these industries. Extensive and time-consuming efforts have, at best, provided a collection of diverse bits and pieces of information ... an incomplete basis for informed understanding and effective action.

Now, instead of this fragmented picture, *Services Indicators* brings you a cohesive whole. An innovative quarterly from Statistics Canada, this publication **breaks new ground**, providing timely updates on performance and developments in:

- Communications
- Finance, Insurance and Real Estate
- Business Services

Services Indicators brings together analytical tables, charts, graphs and commentary in a stimulating and inviting format. From a wide range of key financial indicators including profits, equity, revenues, assets and liabilities, to trends and analysis of employment, salaries and output – PLUS a probing feature article in every issue, *Services Indicators* gives you the complete picture for the first time!

Finally, anyone with a vested interest in the services economy can go to *Services Indicators* for current information on these industries ... both at-a-glance and in more detail than has ever been available before – all in one unique publication.

If your business is serving business in Canada, or if you are involved in financing, supplying, assessing or actually using these services, *Services Indicators* is a turning point – an opportunity to forge into the future armed with the most current insights and knowledge.

Order YOUR subscription to *Services Indicators* today!

Services Indicators (catalogue no. 63-016-XPB) is \$116 (plus GST/HST and applicable PST) in Canada, US\$116 in the United States and US\$116 in other countries.

To order, write to Statistics Canada, Operations and Integration Division, Circulation Management, 120 Parkdale Avenue, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

If more convenient, fax your order to 1-800-889-9734 or (613) 951-1584 or call 1-800-267-6677 toll-free in Canada and the United States [(613) 951-7277 elsewhere] and charge to your VISA or MasterCard. Via Internet: order@statcan.ca.

Au sujet des entreprises au service des affaires du Canada et à leur intention...

Enfin regroupées en une publication, des données courantes et des analyses éclairées sur ce secteur ESSENTIEL!

Le secteur des services domine à l'heure actuelle les économies industrielles du monde. Les télécommunications, les opérations bancaires, la publicité, l'informatique, l'immobilier, le génie et l'assurance représentent une gamme éclectique de services sur lesquels reposent tous les autres secteurs économiques.

En dépit de leur rôle critique sur le plan économique, il est toutefois difficile de savoir ce qui se passe dans ces branches d'activité. Des efforts considérables et fastidieux ont permis, au mieux, de rassembler une collection de renseignements fragmentaires divers... qui ne favorisent pas la compréhension avisée et la prise de mesures efficaces.

Remplacez **maintenant** ce tableau fragmentaire par l'image cohérente que vous offre *Indicateurs des services*. Cette publication trimestrielle innovatrice de Statistique Canada **pénètre dans un domaine inexploré**, fournissant des aperçus opportuns du rendement et des progrès dans les domaines suivants :

- Communications
- Finance, assurance et immobilier
- Services aux entreprises

Indicateurs des services rassemble des tableaux analytiques, des diagrammes, des graphiques et des observations en un mode de présentation stimulant et attrayant. En puisant à même une vaste gamme d'indicateurs financiers importants, allant notamment des profits, des capitaux propres, des recettes, de l'actif et du passif aux tendances et analyses de l'emploi, des salaires et de la production – à laquelle s'ajoute un article de fond exploratif dans chaque numéro, *Indicateurs des services* brosse pour la première fois un tableau complet!

Enfin, quiconque s'intéresse au secteur des services peut consulter *Indicateurs des services* pour trouver des renseignements courants sur ces branches d'activité... tant sous une forme sommaire qu'à un niveau de détail n'ayant jamais encore été offert – et ce, dans une même publication.

Si vous êtes de ceux qui fournissent des services aux entreprises canadiennes, ou si vous financez, fournissez ou évaluez ces services ou y avez en fait recours, *Indicateurs des services* représente un tournant – une chance de s'aventurer dans l'avenir en étant armé des réflexions et connaissances les plus actuelles.

Commandez dès aujourd'hui VOTRE abonnement à *Indicateurs des services*!

Indicateurs des services (n° 63-016-XPB au catalogue) coûte 116 \$ (plus TPS/TVH et la TVP en vigueur) au Canada, 116 \$ US aux États-Unis et 116 \$ US dans les autres pays.

Pour commander, écrivez à Statistique Canada, Division des opérations et de l'intégration, Gestion de la circulation, 120, avenue Parkdale, Ottawa (Ontario) K1A 0T6, ou communiquez avec le Centre régional de consultation de Statistique Canada le plus près (voir la liste qui figure dans la présente publication).

Si vous préférez, vous pouvez télécopier votre commande en composant le 1-800-889-9734 ou le (613) 951-1584 ou téléphoner sans frais du Canada et des États-Unis au 1-800-267-6677 [ou d'ailleurs au (613) 951-7277] et porter les frais à votre compte VISA ou MasterCard.

The most current single-volume reference source available

Canada Year Book 1999

Canada Year Book 1999, the indispensable multi-purpose reference classic, richly displays and analyzes the complexities of living and working in Canada today. Revealing and insightful, it is also a statistical portrait of Canada at the dawn of a new millennium.

Clearly written, diligently researched, handsomely laid out and colourful, **CYB99's** all-new content, format and style present Canada in four thematic sections — **The Environment, The People, The Economy, and The Nation.**

Whether you prefer the practicality and pleasure of the book, or the functionality and portability of the CD-ROM, you will have Canada at your fingertips.

With information this accessible, for work, home or school, **Canada Year Book 1999** is a sure bet to engage, enlighten, and enthrall you. And it makes a great gift as well!

En un seul volume, l'ouvrage de référence le plus à jour qui soit

Annuaire du Canada 1999

L'Annuaire du Canada 1999, ouvrage de référence devenu indispensable à une foule d'utilisateurs, présente et analyse de façon remarquable les complexités de la vie et du travail des Canadiens d'aujourd'hui. Révélateur et pénétrant, il brosse également un tableau statistique du Canada à l'aube du nouveau millénaire.

Fruit d'une recherche minutieuse, rédigée dans un style clair et précis et richement illustrée en couleur, cette version entièrement refondue de l'**Annuaire du Canada** décrit la réalité canadienne dans quatre sections thématiques — **L'environnement, La société, L'économie et L'État.**

Que vous préférerez l'aspect pratique d'un livre agréable à consulter ou l'aspect fonctionnel d'un CD-ROM à emporter partout, vous aurez à portée de la main une mine de renseignements sur le Canada.

Grâce à ses myriades de renseignements très utiles au travail, au foyer ou à l'école, l'**Annuaire du Canada 1999** ne manquera pas de vous éclairer et de vous captiver. Il constitue également un superbe cadeau!
